## How to Handle Shipping

Posted by dpeterd - 2007/12/22 04:52

---

Has anyone found a way to integrate real-time shipping rate calculations for UPS/USPS/FEDEX etc?

Is there a way to use the API and embedding HTML or PHP code in the HTML Sections of the Shopping Cart Areas.

dpeterd,

There are plenty of scripts out there that will help with the integration of real-time shipping data; example:  
<http://www.hotscripts.com/Detailed/43072.html>

However, even if you host the sales page so you could use PHP or ASP code, I don't believe the shipping table is accessible via the API for the purpose of dynamically updating a shipping 'id' value then using the id on the sales page.

At least the API documentation and wsdl I have does not include that table. :(

It seems this would be a feature Infusionsoft would have to give us more data access in order to build, or add the feature into the CRM itself.

- I haven't used the shopping cart, but I'm shocked that it isn't included in the cart by default.

Mike

I'd like to bring this back from the dead :)

Do you guys (Infusion) have any plans at all to integrate real time shipping?

or at least make it so we can do it ourselves via API?

If all the shopping is done via the the infusion-API, I don't see a problem with employing any code that calculates the shipping.

Has anyone found a shopping cart that will handle the USPS API so we can get real time shipping costs AND integrate with Infusionsoft?

If so, please contact me!!

Thank you.
